

ARCODA
Smart

Discover how to easily manage
the flow of work orders with
a smartphone or tablet.

www.arcoda.it

Your smartphone becomes the only, simple and fast tool for managing the work order flow!

The **flow of information** between the management center and the operators on the ground has never been more efficient! The Arcoda Smart platform allows to **prepare and send the Work Orders - already geo-referenced** and complete with relating support **documentation – directly to the smartphones** of the operators concerned. In turn, the operators, thanks to their Android devices, can then update **the work progress status** and send **geo-referenced reports back to the management center**, if necessary with attachments (photographs taken in the field, criticality alerts, update reporting) and, where required, with the client's signature signed directly on the handheld device. This way, everything is always under control!

Smart eliminates the use of paper, making communication less costly and much quicker.

Smart doesn't stop when the Internet connection is down! The App has been designed to work even off-line and to ensure continuous workflow on the ground.

Smart makes information flow between operators and the management center easy and fast. The supervisor can check in real time how work is progressing!

*With Smart we work with our smartphone, easily and quickly.
No more paper!*

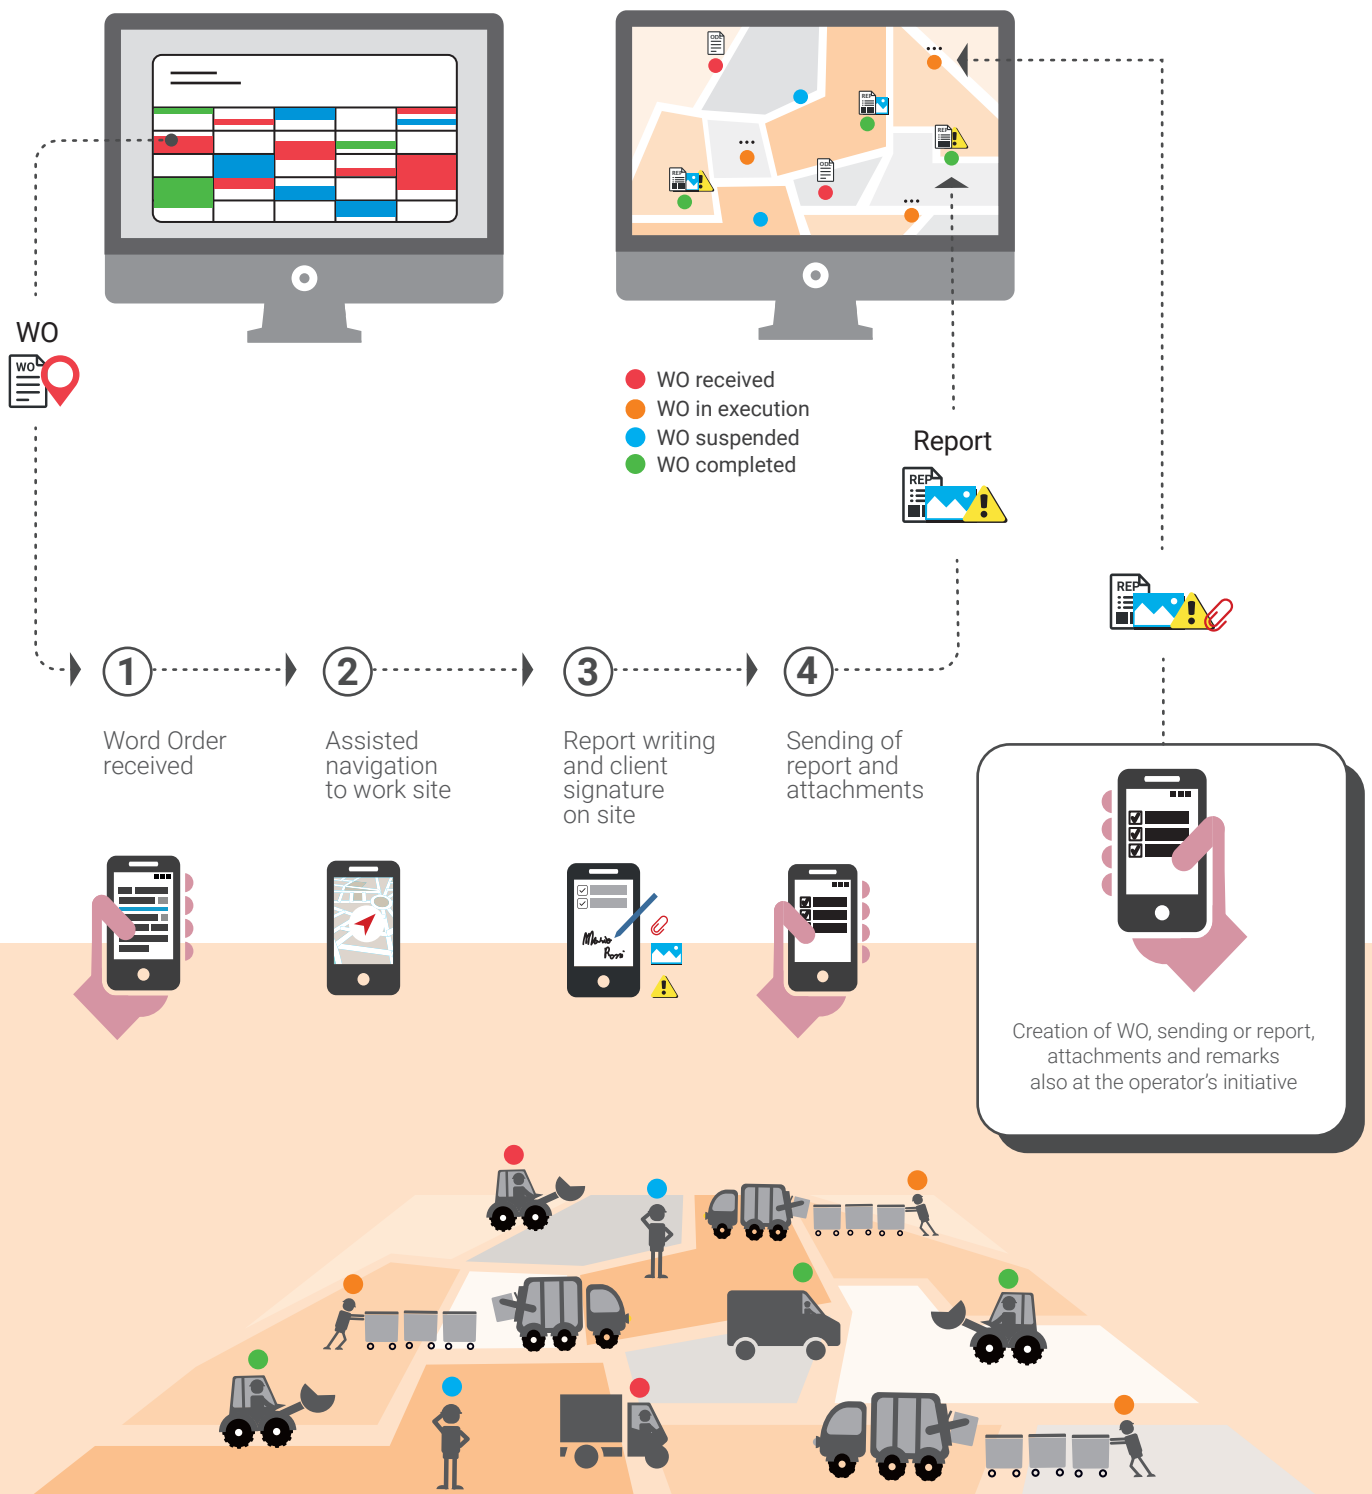

- NETWORK AND SYSTEM MAINTENANCE
- INSTALLATION ACTIVITIES
- OVERSIZED AND SPECIAL WASTE COLLECTION
- ON CALL ACTIVITY AND COLLECTION
- URBAN WASTE COLLECTION
- ENVIRONMENTAL INSPECTIONS

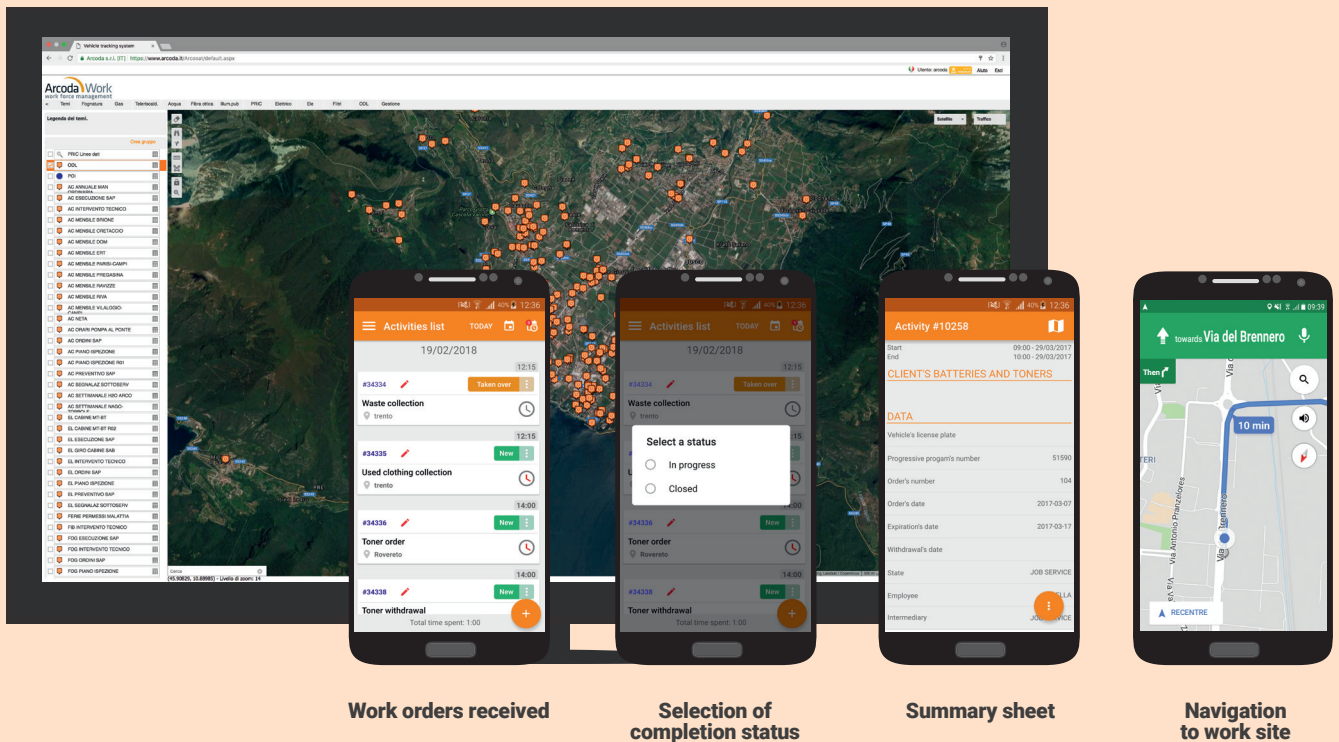

Web portal and Android app

The operators receive **their geo-referenced Work Orders on the smartphone** complete with any other document required for order completion. They can **then update the work progress status** and write their **reports** directly on the smartphone.

Via the Web portal the supervisor can monitor the field activities and have an **always clear and updated** picture of the progress of the work, and dynamically change **priorities and re-allocate resources**. Smart can also assign specific operators the privileges required for **autonomously creating Work Orders from the smartphone**, and for **sending remarks and reports from the field at their own initiative!**

INFORMATION TECHNOLOGY

Arcoda, a reference point of a dynamic work force

Arcoda has been developing innovative software solutions that focus on work force management for more than a decade. The success of our products, which vary from vehicle tracking to high-end GIS applications, is based on the continuous effort and a deep interest in technology applied to work force management.
